### The Energy Struggle We All Face

Ever stared at your electricity bill wondering why it keeps climbing while grid reliability plummets? You're not alone. Last month's Department of Energy report revealed that 72% of U.S. homeowners experienced at least one power outage in 2023 - up 18% from pre-pandemic levels. Traditional solar setups without storage? They're like sports cars without tires - great for sunny days but useless when clouds roll in.

Let's take the Johnson family in Texas. Installed solar panels in 2020, only to realize during 2021's winter storm that their system shut down completely. Without battery storage, their \$30,000 investment became decorative rooftop art during the crisis.

### The Core Challenges

Why do most residential energy systems fail when needed most? Three critical flaws:

- Intermittent power generation (sun doesn't always shine)
- Limited energy reserves (average home systems store
